SUMMARY

DevOps Engineer with hands-on experience in CI/CD implementation, containerization (Docker), Kubernetes orchestration (k3s), Infrastructure as Code (Terraform & Ansible), and monitoring using Prometheus & Grafana. Experienced in deploying and maintaining Linux-based production environments, automating build and deployment pipelines, and ensuring application reliability and performance. Strong problem-solving mindset with practical experience from end-to-end DevOps projects and cloud-based deployments.

EXPERIENCE

DevOps Engineer

January 2025 – February 2026

PT. DumbWays Indonesia Teknologi

- Delivered end-to-end DevOps implementation for DumbMerch (microservices e-commerce) and Wayshub (streaming platform).
- Automated infrastructure provisioning and server configuration to streamline deployment processes.
- Designed and maintained CI/CD workflows to support reliable and consistent application releases.
- Managed containerized multi-service deployments in a production-like environment.
- Implemented centralized monitoring and improved system reliability and deployment efficiency.

UI/UX Designer & Analyst (Intern)

September 2024 – December 2024

SevenInc, Yogyakarta

- Designing wireframes and the UI of the marketplace application using Figma for users and administrators.
- Collaborate with the development team to ensure the design is ready for implementation.

Backend & Deployment Engineer

March 2024 – August 2024

SMK Kartika Nusantara - Online Parking Website

- Developed RESTful APIs and implemented backend logic for parking management features, including request validation and error handling.
- Designed and managed relational database for users and transaction data, ensuring data consistency and reliability.
- Deployed the application to shared hosting (Rumahweb) and maintained the production environment to ensure stable system performance.

SKILLS

- **CI/CD** : Jenkins, GitHub Actions
- **Containerization & Orchestration** : Docker, Kubernetes (k3s)
- **Infrastructure as Code (IaC)** : Terraform, Ansible
- **Cloud Infrastructure** : Biznet Gio Cloud, Google Cloud, AWS (EC2, Security Group)
- **Monitoring & Alerting** : Prometheus, Grafana
- **Version Control** : Git, GitHub
- **Web Server & Reverse Proxy** : NGINX
- **Security & SSL/TLS**: Let's Encrypt (Certbot), HTTPS, Basic Authentication

EDUCATION

S1 Informatics | IPK: 3.44

September 2021 – July 2025

Ahmad Dahlan University

Thesis: *Comparative Analysis of DCT and IWT Steganography Methods on Digital Images Using CIE LAB* (2025)

CERTIFICATIONS & TRAINING

DevOps Bootcamp – Dumbways.id

November 2025 – January 2026

- Intensive DevOps training based on end-to-end projects covering infrastructure provisioning, configuration automation, CI/CD pipelines, containerization, and application deployment to servers and Kubernetes.
- Building and managing centralized monitoring systems, notifications, and implementing basic security practices in Linux and cloud environments.

Google Cloud Computing Foundations Certificate

April 2024 – June 2024

- Basic Google Cloud Platform certification covering cloud computing concepts, cloud infrastructure, networking, security, and resource management.

RELATED PROJECTS / PORTFOLIO

Automation

<https://github.com/FauzanPM/automation>

Automation scripts to manage and run servers automatically, using Ansible to automate all server activities and Terraform for infrastructure provisioning.

DumbMerch – Microservices E-Commerce Platform

<https://github.com/FauzanPM/automation/tree/main/dumbmerch>

- Developed and deployed a microservices-based e-commerce platform using React JS, Golang, and PostgreSQL in a cloud environment.
- Automated infrastructure provisioning and server configuration on AWS (app server, monitoring, gateway) using Terraform and Ansible.
- Implemented CI/CD pipeline with Jenkins, Docker, and private registry integrated with SonarQube for code quality control.
- Managed containerized deployments with NGINX reverse proxy, SSL via Certbot, and centralized monitoring using Prometheus and Grafana.

Wayshub – Video Streaming Platform

<https://github.com/FauzanPM/automation/tree/main/wayshub>

- Developed and deployed a containerized video streaming platform using Node.js and MySQL on AWS infrastructure provisioned automatically with Terraform.
- Orchestrated multi-node Kubernetes (k3s) cluster (master, worker1, worker2) with automated configuration management using Ansible.
- Implemented CI/CD pipeline with GitHub Actions, Docker, and private registry to automate build and deployment processes.
- Configured NGINX Ingress via Helm, SSL management with Cert Manager, and centralized monitoring using Prometheus and Grafana to ensure service availability and observability.

Portfolio Website

<https://fauzan-pm.vercel.app/>

Personal portfolio website containing documentation of DevOps projects and deployment implementations.
